“The Long-Awaited Moon-Joke Episode”

JAMES: Why couldn't the astronauts stay overnight on the Moon?

DEAN: Because it was full.

(STOP AND DROP)

DEAN: How do you know when the Moon's going broke?

JAMES: It's down to its last quarter. On the nights of the 14th and 15th you can see the right half of the Moon lit up. We call that first quarter since it has traveled one-quarter of the way around the Earth from its new moon phase.

DEAN: On February 21 we'll have a full Moon that will rise in the east as the Sun sets. And on Leap Day, February 29, you'll see the left half of the Moon illuminated. The Moon is heading back to being New, so we call that last quarter and it'll be near the planet Mars.

JAMES: If you didn't like our bad Moon jokes, we totally Apollo-gize. We tend to wax poetic. But be sure to Moon-gaze with friends and family this week.

BOTH: Keep looking up!
