"VENUS"

DEAN: OUR OLD FRIEND VENUS HAS RETURNED TO THE EARLY EVENING SKY, AND IT'S JOINED BY TWO OTHER PLANETS, SATURN AND MARS.

JAMES: OF ALL THE PLANETS, VENUS IS ONE OF THE MOST BEAUTIFUL AND ITS POSITION IN THE SKY HAS BEEN PAINSTAKINGLY DOCUMENTED THROUGHOUT RECORDED HISTORY. SO MUCH SO THAT WE DEVOTED THIS ENTIRE EPISODE TO OUR SISTER PLANET. LET'S SHOW YOU!

-----**(STOP)**

DEAN: OK, WE HAVE OUR SKIES SET TO ANY DAY THIS WEEK, SHORTLY AFTER SUNSET, FACING SOUTHWEST. YOU'LL SEE THE BRIGHT PLANET VENUS AMONG THE STARS OF SAGITTARIUS. IT IS JOINED BY SLIGHTLY DIMMER SATURN TO THE RIGHT OF IT AND THE RED PLANET MARS TO THE LEFT OF IT.

JAMES: VENUS WILL BE GETTING FURTHER AND FURTHER FROM SATURN AS THE DAYS PASS. SO OVER THE REMAINING 5 MONTHS, ENJOY WATCHING THE BEAUTIFUL PLANET VENUS AS SHE GRACES THE EVENING SKY FOR ALL TO SEE.

DEAN: AND IT'S EASY TO DO IF YOU REMEMBER TO...

BOTH: KEEP LOOKING UP!
